

Freeform Injection Molding

A faster track to innovative product solutions

Freeform Injection Molding delivers the qualities of injection molding on an additive platform. Full design freedom at speed, with peerless quality, seamless scalability and an unlimited access to approved materials.

Step 1: Print the mold

A patented 3D printing platform let you produce the most advanced molds.

Step 2: Inject material

Fill the molds with the material of choice using your standard injection molding machine.

Step 3: Uniformly remove the mold

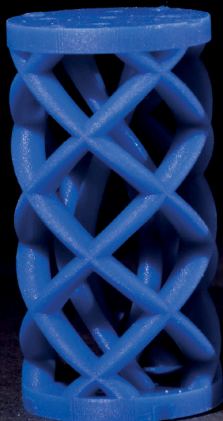

Once filled the mold may be completely removed to release your advanced geometry.

Stop by booth 2105 to experience: real molding, real materials...in real time!

Live demonstrations of the FIM process at 10:30 am, 2:00 pm and 4:00 pm daily.
