Alba moves to Colorado, boosts in-house capabilities

Plastics News Report

Loveland, Colo. — Alba Enterprises LLC has moved to Colorado from California, adding workers, 3D modeling and in-house mold sampling on micromolding injection molding machines.

Alba's new site in Loveland is within an hour of Denver's international airport. The new site opened in November 2020.

"We designed and built the new facility in order to deliver comprehensive, multidisciplinary guidance solving application needs spanning DFM, tooling, thermodynamics, advance simulation, and machine and auxiliary selection," CEO Rich Oles said in a Jan. 20 news release. "Alba provides project management from part inception, mold build, first articles, and delivery and installation of the final production cell."

Alba distributes Cronoplast SL's Babyplast micro injection molding machines, Vega srl mold hydraulic cylinders, Alba-brand Quick Knockout Couplers and Alba-developed peripherals and mold components.

In moving from Torrance, Calif., to Colorado, Alba now supports mold sampling run on Babyplast micro machines with Vega and Moretto auxiliaries.

Molding capabilities are available up to 10 tons, 36 grams and 425°C resin temperatures.

"For Alba, the phrase, 'client-driven solution provider' has a definite and specific meaning," Oles said. "It is no longer enough to sell a machine and a dryer; clients want fully vetted, operational production cells, along with the confidence their capital investment will result in

the timely production of real parts. This process requires an individualized, ongoing, and accountable relationship."

Alba also is continuing its strategic partner relationships with companies such as Kruse Analysis, Asaclean, Moretto USA, HRSflow, Scientific Molding, Kistler, Cold Jet, Angel Hill Technologies Inc., MoldTrax and a mold makers, he said.

For more information, contact Alba at 508 West 69th Street, Loveland, CO 80538. Tel: 1-909-941-0600. info@albaent.com.
